

Filipino MVL Expert Review System Primer

Review Context

Item	Details
System	REDU Android app sentiment module
Purpose of review	Validate Filipino and Taglish terms used to extend the app's VADER-compatible sentiment analyzer
Sentiment method	VADER-compatible lexicon and rule-based scoring
Expert task 1	Rate each MVL candidate word from -4 to $+4$ based on common Filipino social-media usage
Expert task 2	Confirm whether each Filipino stop word can be treated as sentiment-neutral with valence 0.0
Post-review use	Terms with acceptable agreement across three experts will be retained and integrated into the Android app's runtime lexicon

System Summary

Concept	Explanation
VADER-compatible sentiment scoring	The app analyzes caption and comment text using tokenization, lexicon lookup, and VADER-style rules such as negation, boosters, capitalization, and punctuation emphasis.
Compound score	The app converts the summed valence of recognized tokens into a bounded score from -1.0 to $+1.0$. Scores below -0.05 are treated as negative.
MVL	The Minimum Viable Lexicon is a small Filipino and Taglish lexicon added to improve analysis of Philippine social-media text.
Expert polarity rating	Experts independently rate candidate words using VADER's original -4 to $+4$ valence convention.
Stop-word neutrality	Filipino stop words are assigned 0.0 valence. They reduce out-of-vocabulary counts but should not add positive or negative sentiment.

Rating Scale

Rating	Meaning	Use when the term is commonly...
-4	Most negative	Extremely negative, hostile, insulting, distressing, or harmful
-3	Strongly negative	Clearly negative with strong emotional force
-2	Moderately negative	Negative, unpleasant, sad, angry, fearful, or critical
-1	Slightly negative	Mildly negative or contextually unfavorable
0	Neutral	Not sentiment-bearing, unclear, or dependent on context
+1	Slightly positive	Mildly favorable or pleasant
+2	Moderately positive	Clearly positive, happy, approving, or favorable
+3	Strongly positive	Very positive or strongly approving
+4	Most positive	Extremely positive, joyful, affectionate, admiring, or celebratory

Expert Instructions

Step	What to do	Output needed
1	Read the system context and rating scale above.	No entry required
2	For each MVL candidate word, assign a sentiment rating from -4 to +4 . Decimals are allowed if needed.	Fill the Expert rating (-4 to +4) column
3	If a word is ambiguous, slang-dependent, offensive, or context-sensitive, write a short note.	Fill the Notes / concern column
4	For each Filipino stop word, decide whether it is acceptable as sentiment-neutral.	Fill Yes , No , or Revise under the approval column
5	For any stop word that should not be neutral, explain why and suggest a change.	Fill the stop-word notes column
6	Complete the final approval table at the end of this document.	Name, role, decision, date, and signature

General comments	

Researcher Processing After Expert Review

Step	Researcher action
1	Collect completed primers from three Filipino language experts.
2	Compute the mean valence rating for each MVL candidate term.
3	Retain only terms where all three ratings are within plus or minus 1 of the mean.
4	Use the retained term mean as the final MVL valence score.
5	Review stop-word approvals and revise the neutral stop-word list if any expert flags a term.
6	Update the Android app lexicon and document the final retained terms in the thesis.
